CARRIER OBJECTIVE

Experienced software developer with a proven track record of delivering scalable and resilient applications. Seeking a challenging role where I can apply my expertise in full-stack development and cloud technologies to contribute to innovative projects. My objective is to join a forward-thinking organization that values creativity and embraces new technologies, allowing me to further enhance my skills and make meaningful contributions to the success of software development initiatives.

EXPERIENCE

Syndnet | Lead Software Engineer **Sep 2025 - Present**

- Improved backend scalability and query efficiency by designing FastAPI-PostgreSQL/PostGIS schemas and optimizing asynchronous ORM operations for property data.
- Accelerated property intelligence generation by integrating ATTOM and OpenAI APIs through RAG-based retrieval, reducing manual data aggregation time.
- Increased data accuracy and ranking precision by building a property scoring engine (1-100) using ATTOM and GIS overlays filtered by user buy-boxes.

VerosAI | Founding Engineer **Aug 2024 - Apr 2025**

- Designed a highly scalable backend system for seamless data migration to SAP S4/HANA cloud, ensuring data integrity through enterprise-grade validation, AI-powered anomaly detection, and regulatory compliance.
- Enhanced ETL workflows using multithreading and parallel processing, achieving a 35% performance gain and halving overall processing time to support real-time analytics.
- Delivered secure REST APIs with AES encryption, SHA-256 hashing, and OAuth 2.0, safeguarding data confidentiality while maintaining system uptime with zero security breaches.

Joyride Games | Software Engineer **Oct 2022 - Jun 2023**

- Enabled 100K+ secure digital wallet transactions per day by engineering a payment gateway with high-throughput APIs and a scalable relational database backend.
- Reduced payment errors and ensured transactional integrity under peak load by implementing concurrency-safe credit/debit flows with distributed locking.
- Improved customer security and trust by designing a role-based access system with short-lived tokens, refresh flows, and fine-grained session controls.
- Protected internal services from misuse and abuse by delivering secure APIs with rate limiting, token introspection, and controlled partner access.
- Increased transparency for customers and operations teams by developing a real-time analytics dashboard to visualize wallet usage, transaction history, and balances.

Amazon | Software Engineer **Jul 2021 - Aug 2022**

- Reduced invoices search latency for real-time queries by designing and implementing optimized JDBC operations with feature toggles, improving performance and responsiveness for end users.
- Streamlined monitoring and validation of large invoice batches by integrating with 120+ APIs, enabling faster error detection and resolution at scale.
- Enhanced system reliability and audit accuracy by contributing additional fields to the invoice header, improving data completeness for compliance checks.
- Accelerated invoice data retrieval and validation by integrating advanced search algorithms, cutting query times and boosting operational efficiency.
- Modernized the TIPS UI to version 2.0 by leading multiple feature improvements, improving performance and user experience for business stakeholders.

SKILLS

- **Languages:** Java (JVM), Python, TypeScript, SQL
- **Frameworks:** Spring Boot, WebFlux, FastAPI, React
- **Cloud & DevOps:** AWS(EC2, Lambda, RDS, S3), Docker, Kubernetes, GitHub actions, Terraform
- **Monitoring & Observability:** Prometheus, Grafana, OpenTelemetry, WebSockets
- **Security:** JWT, RBAC, Secure REST API design, OAuth2
- **Database:** MySQL, PostgreSQL, MongoDB, Redis

- **Tools:** Git, Linux, Swagger, Postman, Jira, Streamlit
- **Open Source & Packaging:** Snap packaging, Docker images, Debian packaging (apt), System Design, Distributed Systems

PERSONAL PROJECTS

ScoutIQ - AI Property Intelligence Companion GitHub

- Built with FastAPI-based backend and Streamlit dashboard integrating Travis County ATTOM datasets (Recorder, TaxAssessor, AVM) with PostgreSQL to generate real-time property insights and investment indicators.
- Designed AI summarization endpoints (/ai/ask, /ai/summarize) to query structured property data and deliver ScoutGPT-powered natural-language insights and “Buy/Hold/Watch” recommendations.
- Implemented scalable data ingestion pipelines processing 700K+ property records, computing derived signals (valuation, ownership, flood risk, loan maturity) and enabling conversational analytics through ScoutGPT.

To-Do App - Task Manager with Spring Boot + React GitHub

- Developed an end-to-end tweet analytics platform with live tweet ingestion, topic classification, and keyword-based filtering.
- Integrated HuggingFace Transformers for multilingual sentiment and intent analysis, improving category accuracy to 92%.
- Built MongoDB + MySQL hybrid storage and REST API layer using FastAPI for low-latency tweet retrieval and advanced querying.

TwitterVault - Scalable Tweet Analysis Engine GitHub

- Built a role-based task management platform with JWT auth, RESTful APIs, and MySQL-backed data storage.
- Developed a modern React UI with task assignment, status toggles, alerts using Toastify, and responsive design via React.
- Implemented secure session management with token refresh, rate-limited routes, and user activity logging.

RESEARCH EXPERIENCE

Estimation of Liquid Limit of Soil Data

- Built a machine learning model for estimation of Liquid Limit from Spectral reflectances of Soil Samples, under the guidance of Dr. Babani Shankar Das.
- Developed a machine learning system by leveraging Python, MLFlow, AutoML, and HyperSpy evidently which involves implementation of a chemometric model by developing a mathematical relation between Visible-Near Infrared reflectance values to the laboratory tested values of soil Liquid Limit.
- The results from this study can be used in designing proper guidelines for industry designers and employers to improve building huge projects like roads, industries which avoids natural disasters.

EDUCATION

Rutgers, The State University of New Jersey **Aug 2023 - May 2025**

Master of Science, Statistics (CGPA 3.65/4.0)

Indian Institute of Technology, Kharagpur **Aug 2016 - May 2021**

Dual Degree(B-Tech + M-Tech), Engineering (CGPA 7.02/10.0)
